PROFESSIONAL SUMMARY

IT graduate with over one year of professional software development experience focused on Python automation and internal business applications. Has strong teamwork and communication experience, with limited evidence of modern web framework development.

EDUCATION

Bachelor of Software Engineering — Pacific Adventist University, 2023

TECHNICAL SKILLS

Python — Over 1 year of professional experience developing Python automation and internal tools.

Web Development — Built basic internal web interfaces using Python and simple server-side templates; no substantial Django, Flask or React experience documented.

Version Control — Uses Git for source control and code collaboration.

Databases — Worked with Oracle and SQL Server in internal business applications.

PROFESSIONAL EXPERIENCE

Associate Software Developer — Southern Technology Group — 2024–Present

- Develop Python automation scripts and internal business applications.
- Maintain existing software, investigate defects and assist with testing.
- Work as part of a six-person application support and development team.
- Communicate incident findings and technical solutions to business users and managers.

PROJECTS

Data Processing Automation — Created Python scripts that validate and transform operational data before loading it into SQL Server.

Oracle Reporting Utility — Maintained Python utilities that retrieve and process Oracle database information.
